Clarification Note to Hazard Statement (Section 2): To provide practical and compliant health safety warnings under the GHS Communications and REACH Standards, Engineered Fluids has provided these additional clarifying statements to assist our users in fully understanding the safety risks posed by our products.

The GHS Communication Standard requires that all hydrocarbon based chemicals be designated a Category 1 Aspiration Hazard if they have a kinematic viscosity ⩽ 20.5 mm2/s @40 C. This includes products like our Dielectric Coolants, regardless of all other characteristics (including their biodegradation, non-toxicity, and food grade certification)

Some Engineered Fluids' products have a kinematic viscosity ⩽ 20.5 mm2/s, measured at 40 C, and therefore must be labeled as a Aspiration Hazard to comply with GHS Communications standards, even though this safety statement does not correctly describe the risk posed by use of the products.

These products do not pose a toxicity risk if small amounts are swallowed or ingested. However, the standardized wording does not make this differentiation clear and requires the statement "swallowed and enters airways," even though there is little health risk posed by swallowing.

DS-200 has a very low vapor pressure, thus there is no inhalation hazard for fumes or vapors within the operating temperature range.

The most probable hazard related to aspiration posed by DS-200 is the inhalation of a "mist" of the product. The definition of a "mist" for the purposes of this SDS is the creation of product particles suspended in air which are created by spraying the product at high pressure through a small orifice.
